

FSMAO CLARIFICATION NOTICE 19-98

Inventory Extracts for Combat Rubber Reconnaissance Craft (CRRC) and the Improved Military Amphibious Reconnaissance System (I-MARS): Clarification was requested and received on the inventory extracts required for the CRRC and I-MARS. The following adjustments to the inventory extracts are authorized:

a. Items on page 5-2, figure 5-1 of TM 09737A-14&P are using unit responsibility items (UURI). These items were never intended to be SL-3 items for each motor. The commanding officer will authorize the total quantity to be maintained by the unit. Sub-kit inventories will be established for each "pump jet kit."

b. Item numbers 29, 31, and 32 depicted on page 1-2 and 1-3 of TM 08509B-14&P, item number 29 (fuel tank), and item number 31 (tool kit) will be accounted for as UURI's and the quantity to be maintained will be established by the commanding officer. Sub-kit inventories are required for item number 31 or, at a minimum, its contents must be listed in the description of the item on the inventory extract established by the owning units. Item number 32 (hour meter) is not required and should be deleted.

c. Item numbers 6, 7, 8, and 9 (floorboards) listed on page B-2 of TM 099665A-13&P/1-2A are repair parts (SL-4 items) and are not required (command discretion) to be listed on the inventory. Additionally, item number 1 listed on page B-4 of SL-3-09665A was not published. The correct reference is TM 09665A-10/1, under the heading "Loose Standard Equipment." Item number 10, transducer, was not required nor fielded.
